

Division: Cake Eating

Cut out the cake pieces at the bottom of the page. Place a cake piece under each kid, one at a time, until all the pieces are placed. This will solve the division problem below. Once you solve the problem, glue the cake pieces to the page.

If your mom's cake was cut into 12 pieces and 4 kids were going to eat them, how many pieces of cake could each kid eat?

That's the answer to this: $12 \div 4 = \underline{\quad}$
