Changing States of Matter

Use the words in the box to fill in the blanks below.

0° cool heat 100° freeze melt 32° condense evaporate 212°

When you _____ water to _____ C or _____ F, it will ___________ to form steam.

When you _____ steam to _____ C or _____ F, it will ___________ to form water.

When you _____ ice to _____ C or _____ F, it will ___________ to form water.

When you _____ water to _____ C or _____ F, it will ___________ to form ice.
Fill out this worksheet as you work through the experiment.

Procedure: ________________________________

Observations/data: ________________________________

Conclusion: ________________________________
Matter

Use this notebooking page as you watch the video to write down any new vocabulary words and to take general notes on the content of the video. Then label the atom at the bottom.
Fill in this chart for helium.

- Protons
- Mass Number
- Atomic Mass
- Neutrons
- Electrons
- Atomic Number
Atoms

Draw 6 protons in the nucleus of the atom and label them with their charge.

Draw 6 neutrons in the nucleus of the atom.

Draw 2 electrons on the inner ring and label them with their charge.

Draw 4 electrons in the outer ring and label them with their charge.

What is the atom?  

Fill in the missing information from the chart.

Acids and Bases

Answer the following questions about acids and bases.

What is a characteristic of an acid? ____________________________

What is a characteristic of a base? ____________________________

List some acids: ____________________________________________

List some bases: ____________________________________________

What is the pH of a strong acid? ____________________________

What color does a strong acid turn when tested for its pH level? ____________________________________________

What is the pH of a strong base? ____________________________

What color does a strong base turn when tested for its pH level? ____________________________________________

What atom is abundantly present in an acid? ________________

What atom is abundantly present in a base? ________________
Chemical Reactions

Fill in the blanks as you watch the video.

1. A chemical reaction is the process of one or more substances ______________ to form new substances with different properties.

2. In chemical reactions, a new substance is formed from chemicals ______________ with each other.

3. ______________ are substances that enter a chemical reaction, while ______________ are substances that are produced by a chemical reaction.

4. A chemical ______________ is an expression using chemical symbols to represent a chemical reaction.

5. A plus sign is used to show that substances ______________.

6. An ______________ is used to show products yielded by reactants.

7. Label the reactants and the products in this chemical equation:

   ______________    ______________

   \[2H_2 + O_2 \rightarrow 2H_2O\]

8. The law of the ______________ of mass says that mass cannot be gained or lost in a chemical reaction.

9. The number of ______________ of each element must be the same before and after a chemical reaction.

10. A ______________ reaction is where two or more simple substances combine to form a more complex substance.

   (continued on next page)
11. A ______________ reaction is where a substance breaks down into two or more simple substances.

12. A ______ - _______ reaction is where atoms of one element replace atoms of another element in a compound.

13. A ______-________ reaction is where atoms in two different compounds trade places with each other.

14. Chemical reactions involve __________ being given off or being absorbed.

15. An ___________ reaction releases energy and gives off heat.

16. An ___________ reaction absorbs energy resulting in the lowering of temperature.

17. Variables such as temperature, surface area, and concentration affect the __________ of chemical reactions, or the speed with which reactants turn into products.

18. The __________ _______ is the amount of material that comes in contact with other reactants.

19. _________________ is the amount of substance in a given unit of volume.

20. A ____________ is a substance that increases the reaction rate but is not changed by the reaction.
Experiment Worksheet

Fill out this worksheet as you work through the experiment.

Question: ____________________________________________

Hypothesis: __________________________________________

Materials: ____________________________________________

Procedure: __________________________________________

Observations/data: ____________________________________

Conclusion: _________________________________________
Density Worksheet

Answer the questions about density. You can use a calculator. Remember that \( \text{Density} = \frac{\text{Mass}}{\text{Volume}} \). You can reverse that to be \( V = \frac{M}{D} \) and \( M = D \times V \).

1. A container has a capacity of 1400 milliliters. If the density of ethanol is .789 g/mL, what mass of ether can the bottle hold?

2. 200 grams of a liquid fills a 400 mL container. What is the density of the liquid?

3. If a block of iron measures 1 cm x 2 cm x 3 cm and weighs 47.16 grams, what is its density?

4. The density of mercury is 13.6 g/mL. What is the mass of 10 mL of mercury?

5. If a solution has a density of 2.5 g/mL, how many grams are needed to obtain 10 mL of solution?

6. A piece of silver has a mass of 3360 grams and occupies a volume of 320 cm\(^3\). What is the silver’s density?

_________________________________________________________________
Endothermic Reaction

Use these sheets to conduct your endothermic and exothermic experiments.

Endothermic Reaction Procedure:

1. Measure 10 ml of vinegar and pour it into a clear container.

2. Place a thermometer in the container. Measure and record the temperature of the vinegar on the chart.

3. Leaving the thermometer in the cup, add $\frac{1}{2}$ teaspoon of baking soda.

4. Watch the thermometer and observe the changes in temperature. When the thermometer stops moving, record the temperature on the chart.

<table>
<thead>
<tr>
<th>Temperature</th>

<tr>
<td>Increase or decrease?</td>
</tr>
</tbody>
</table>

(continued on next page)
Exothermic Reaction

Exothermic Reaction Procedure:

1. Measure 10 ml of baking soda solution and pour it into a clear container.

2. Place a thermometer in the container. Measure and record the temperature of the baking soda on the chart.

3. Leaving the thermometer in the cup, add ½ teaspoon of calcium chloride.

4. Watch the thermometer and observe the changes in temperature. When the thermometer stops moving, record the temperature on the chart.

5. Now add another 5°C or 10°F to the temperature you achieved. This is your target temperature for your next three trials. Fill it in on the chart in all three columns.

6. Try changing the amount of baking soda solution or calcium chloride in each trial to reach the target temperature.

<table>

Electricity Timeline

Use the blanks to fill in a timeline of electricity events you want to remember. Be sure to include the year.
Circuits

Write any notes about circuits from your assignments today.

Explain an open circuit. Draw an example.

Explain a closed circuit. Draw an example.
Static Electricity

Do the following experiment and take notes on what happens and why.

Materials: two balloons, two 3-foot pieces of string, tape.

Procedure: Blow up the balloons and tie the strings to the ends. Hang them beside each other in a doorway so that they are close but not touching each other. From their hanging position, rub each balloon on your hair and then let go. Record what happens.

The balloons should have pushed away from each other. Why did that happen? The balloons became similarly charged. What do you know about like charges?
What are magnets?

What have you learned about magnets? Make notes here.
What is the difference between AC and DC power? Fill in what each letter stands for and then explain what the difference is.

A

C

D

C
GFCI Outlet

What is a GFCI outlet? What do the letters stand for?

G

F

C

I

What are benefits of GFCI outlets? Where are they used?

___________________________________________________________

___________________________________________________________

magnetic field

___________________________________________________________

___________________________________________________________
Answers these questions about electromagnets.

An electromagnet runs on ________________.

The strength of an electromagnet can / cannot be changed.

In an electromagnet, electric current produces a ________________
______________.

The magnetic field of an electromagnet can be strengthened by wrapping this around a core. ________________.

As the current in an electromagnet strengthens, the magnetic field gets stronger / weaker.

An electric current flowing towards you will create a magnetic field that will circulate clockwise / counter-clockwise.
Magnetic Grippers

Draw a gripper in action. Explain what’s happening in your picture.
Earth’s Magnetic Field

What creates the Earth’s magnetic field?

What does a compass needle do?

Are the magnetic and geographic poles the same?
Electricity Conductors

Use this sheet to record your findings.

Objective: to find out if objects conduct or carry electricity.

<table>
<thead>
<tr>

Chemistry Review

Define these terms as you work through lessons 96-99.

Lesson 96:
physical change

ionic bond

solubility

Lesson 97:
solute

solvent

Lesson 98:
chemical reactions

(continued on next page)
Lesson 98 continued:
concentrations

Lesson 99:
freezing

heat

evaporation

condensation

temperature
Ionic Bonds

Write a short description beside each picture to show the process of ionic bonding. The first one is done for you.

An atom of sodium and an atom of chlorine are near each other.

Sodium

Chlorine

Sodium ion

Chloride ion

Sodium Chloride (NaCl)
Lewis Dot Diagrams

Answer the following questions about Lewis dot diagrams.

Compare the energy level diagrams to the Lewis dot diagrams.

<table>
<thead>
<tr>
<th>Energy Level</th>
<th>Lewis Dot</th>
<th>Energy Level</th>
<th>Lewis Dot</th>
</tr>
</thead>
<tbody>
<tr>
<td>Na</td>
<td><img src="Na.png" alt="Sodium" /></td>
<td>Cl</td>
<td><img src="Cl.png" alt="Chlorine" /></td>
</tr>
<tr>
<td>Sodium</td>
<td></td>
<td>Chlorine</td>
<td></td>
</tr>
</tbody>
</table>

What do you notice about the dots in each diagram? 

<table>
<thead>
<tr>
<th>Energy Level</th>
<th>Lewis Dot</th>
<th>Energy Level</th>
<th>Lewis Dot</th>
</tr>
</thead>
<tbody>
<tr>
<td>H</td>
<td><img src="H.png" alt="Hydrogen" /></td>
<td>He</td>
<td><img src="He.png" alt="Helium" /></td>
</tr>
<tr>
<td>Hydrogen</td>
<td></td>
<td>Helium</td>
<td></td>
</tr>
</tbody>
</table>

Why are the number of dots associated with hydrogen and helium the same on each type of diagram? 

(continued on next page)
Compare the energy level diagram for a covalent bond in the hydrogen molecule H₂ with the Lewis dot diagram of the same bond.

\[ \text{H} \quad \text{H} \]

\[ \text{H} \quad \text{H} \quad \text{H} \quad \text{H} \]

What do the two dots represent between the Hs? _________________

What do the two lines represent? _________________

Draw a Lewis dot diagram for the covalent bond of two hydrogen atoms to one oxygen atom in a water molecule. Use dots in the first diagram and lines in the second.

\[ \text{H} \quad \text{H} \]

\[ \text{O} \]

\[ \text{H} \quad \text{H} \quad \text{H} \quad \text{H} \]

\[ \text{O} \]
For the following pictures, tell whether the force at work is a push or a pull.

Circle the answer that fits with each picture.

The forces shown are ________ forces.
- pushing
- pulling

The forces shown are ________.
- working together
- opposite

The forces are ________.
- equal
- not equal

The forces ________ balance each other.
- do
- do not

The resultant force is ________.
- 100 n left
- 100 n right
- zero

There ________ motion.
- is
- is not
Force

Sometimes force is shown as a vector. The dot shows where the force begins. The length shows the amount of force. The arrow shows the direction of the force. This vector shows a force of 3 n to the right.

Fill in the chart with the information about the vectors below. Each square is 1 n.

<p>| | | | | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>2</td>
<td>3</td>
<td>4</td>
<td>5</td>
</tr>
</tbody>
</table>

Draw the following vectors on the grid below. 1) 7 n right; 2) 3 n up; 3) 4 n down; 4) 6 n left; 5) 1 n down.
Here are two more examples of vectors showing force. The first chart shows two forces acting in opposite directions. One force is 5 n to the left. One force is 3 n to the right. The resultant force is 2 n to the left as shown.

The second chart shows two forces acting in the same direction. One force is 1 n to the right. One force is 4 n to the right. The resultant force is 5 n to the right as shown.

Draw the resultant vector for each set of vectors below. Then fill in the chart for each set. The first one is done for you.

<table>
<thead>
<tr>
<th>Original forces</th>

</table>
Newton’s Laws of Motion

Write about Newton’s three Laws of Motion.

1st Law: Inertia

2nd Law: Acceleration

3rd Law: Action/Reaction
Newton’s Laws of Motion

Write about your demonstration of each law on the lines.

1st Law: Inertia
An object in motion tends to stay in motion; an object at rest tends to stay at rest.

2nd Law: Acceleration
The acceleration of an object is directly related to the force applied and inversely related to the object’s mass (F=MA).

3rd Law: Action/Reaction
For every action there is an equal and opposite reaction.
Fill in the definition for each word, draw a picture of it, and tell what it reminds you of.

Newton’s Laws of Motion

For each given scenario, write in the blank whether it illustrates Newton’s first, second, or third Law of Motion.

|------------------|------------------------|--------------------------|

My family went on a vacation. We strapped our luggage to the top of the van. One suitcase apparently wasn’t under the strap, and the first time my dad hit the brakes hard, the suitcase went flying forward and spilled clothes all over the highway!

_____________________

A bird was flapping his wings. Each time it pushed its wings down, the bird would go up higher in the air.

_____________________

William was riding a high speed roller coaster that took a banked turn to the right, and he ended up with a bruise on his left shoulder.

_____________________

My brother was lifting a box labeled “books.” He didn’t know my mom had already emptied the box, so he heaved on it, and it went flying through the air. We all had a good laugh.

_____________________

Jaylen was rowing a canoe. Every time she pushed the oar backward, the boat would propel forward.

_____________________

Connor was playing baseball in his yard. He noticed that no matter how hard he swung, he couldn’t hit the real baseball as far as he could hit the foam one.

Simple Machines

Use this page to draw examples of these simple machines as they are assigned.

- Inclined plane
- Wedge
- Lever
- Screw
- Wheel and axle
- Pulley
Fill out this worksheet as you work through the experiment.

**Question:** ________________________________

**Hypothesis:** ________________________________

**Materials:** ________________________________

**Procedure:** ________________________________

**Observations/data:** __________________________

**Conclusion:** ________________________________
Element Go Fish

Carefully tear out these pages and cut out the cards (there are 3 sets of 18 cards). Use them to play a game of element “Go Fish.” Ask any information on the card to learn more about the elements as you play. You need 3 cards for a set.

Science Report Checklist

Use this checklist to help you as you finish up your science project. Aim for a checkmark in each box.

Research
☐ Facts
☐ Sources
☐ Bibliography

Project
☐ 3D
☐ Neat
☐ Teaches all about your topic; shows off all you learned
☐ Self-explanatory: someone could look at it and understand what it’s all about without you explaining it to them
☐ Bibliography displayed with project

Experiment
☐ Demonstrates your topic
☐ Neatly written up with all parts of the experiment worksheet
☐ Able to be done over and over with the same results

Demonstration
☐ Clearly state what your project is about
☐ Tell about what they will learn from your project
☐ Explain how the experiment relates to your topic
☐ Demonstrate the experiment
☐ State your conclusion
☐ Ask if anyone has questions
