

What Did You Learn?

Fill in the blank with the word that best fits.

esophagus	large	liver	lungs	pancreas
skeletal	small	smooth	stomach	

You use your _____ muscles to pick up an apple and take a bite. When you swallow the bite of apple, it heads down your _____ and into the acidic storage of your _____. There, _____ muscles hold onto your food until it's ready to be moved on in the digestion process. The apple's next stop is your _____ intestine, where the apple gets broken down into tiny pieces for transport to your blood. Your _____ adds enzymes and the apple-blood goes through your _____ where poison and waste are filtered out. The clean blood is sent to your _____ for oxygen. The unused portion of the apple heads to your _____ intestine and then out of the body.
