

Ocean Zones

Use the information about ocean zones to answer the questions.

<p>This zone gets the most sunlight, so plants, such as seaweed, abound. Some common animals of the sunlit zone would be seals, sea turtles, sea lions, manta rays, whales, jellyfish, and sharks.</p>	<p>Sunlit Zone 0-656 feet</p>
<p>A small amount of light reaches the twilight zone, so no plants grow. Octopuses and squid and small crustaceans can be found in this zone.</p>	<p>Twilight Zone 656-3,280 feet</p>
<p>The midnight zone doesn't get any sunlight at all. Some of the animals in this zone don't even have eyes. Anglerfish, snipe eel, and tripod fish can be found in this zone.</p>	<p>Midnight Zone 3,280-13,123 feet</p>
<p>The abyss includes sea creatures that don't have a backbone such as sea spiders. Blind shrimp and hagfish can also be found in the abyss.</p>	<p>Abyss 13,123-19,685 feet</p>
<p>The hadal zone mostly includes frigid parts of the ocean in deep canyons and trenches. Despite the depths and the cold, some life can be found in the hadal zone, including sea cucumbers.</p>	<p>Hadal Zone 19,685-36,197 feet</p>
