

Fix the errors you find in the following paragraphs. There are ten mistakes.

In the 1950's, the space race was hot particularly between the united states and the Soviet Union. Each nation wanted to be the first one to do a certain thing in space. Some of the firsts were the first launch into space, first animal in space, first human in space, first human to orbit the earth, and others. When the Soviet Union started to get the lead in the race, the United States, in desperation, opened a project with one goal. They want to nuke the moon.

The precision was important. The whole point of nukeing the moon was making it visible to people. They planed to aim for the edge of the visible side of the moon. That way the cloud from the explosion would be illuminated by the sun and visible far and wide. Ultimately the project was abandoned do to concerns about contaminating space or the bomb detonating early and endangered the inhabitants of the earth.
