

Ocean Lapbook

Sinks

Cold water

Cut the rectangle above as one piece. Keep on the tabs. Cut along the dotted lines.

Fold the tabs back and glue them down. You will also put glue on the back of these tabs to attach it to the lapbook.

Cut out the skinny rectangles along the black lines.

Insert the "cold water" strip to the left so that it pulls down.

Insert the "water flows" strip to the right so that it pulls up.

In the blue sections you could use the info in the other animated diagram on the webpage to write "Organic..."

When you attach to the lapbook, only glue down the sides and middle.

Water flows toward the equator

Pushing water up to the surface
